Date _____

Tested by _____

Room / lab _____

Tick ☐ when a test works. If something fails, circle **Problem** and write what you saw in the notes (a screenshot is even better). About 30–45 minutes in total.

A Android phone — Chrome · model: _____

☐	Open the link. The home page loads within a few seconds and nothing is cut off at the sides.	OK / Problem
☐	Chrome menu ⋮ → **Install app** (or **Add to Home screen**). The app icon appears on the home screen.	OK / Problem
☐	Open the site from the icon: it opens full screen, without the browser address bar.	OK / Problem
☐	Unit 1: read a section; tap an underlined word (e.g. *Git Bash*) and a definition pops up.	OK / Problem
☐	Playground: type `git --version`; the keyboard does not hide the typing line; the key bar (Tab, ↑, git…) works.	OK / Problem
☐	Missions → **M-03 Day One**: finish it; every goal ticks and the success message appears.	OK / Problem
☐	A note "Saved for offline use" appears once (first visit only — may already have shown).	OK / Problem
☐	**Airplane mode on**: open the app from the icon → home, Unit 2 and the Playground still open; M-03 is still marked done.	OK / Problem

B iPhone — Safari · model / iOS: _____

☐	Open the link in **Safari**. Home page loads; text size is comfortable; nothing is cut off.	OK / Problem
☐	**Share ⬆ → Add to Home Screen**. The icon appears and opens the site full screen.	OK / Problem
☐	Playground: type `mkdir test && cd test && git init`; output appears; the page does not zoom in oddly.	OK / Problem
☐	Missions → **M-01 Who am I?**: finish it.	OK / Problem
☐	**Airplane mode on**: open from the icon → home and Unit 1 open.	OK / Problem

C Lab PC — Chrome or Edge, and Firefox if installed

☐	Press `Ctrl`+`K` and search `detective` → Mission M-12 is found.	OK / Problem
☐	Unit 3 → ▶ **Try it** on a command opens the Playground with the command ready.	OK / Problem
☐	Cheat sheet → **Print**: preview shows 2 clean pages.	OK / Problem
☐	Same tests in **Firefox** (Playground + one mission).	OK / Problem

D Classroom projector — Teach page → Session 1 → ▶ Present

☐	`F` full screen. Slide text is readable from the **last row**.	OK / Problem
☐	`G` projector boost makes colours and text brighter (try both on this projector).	OK / Problem
☐	Clicker / `→` `←` move through slides and their step-by-step points.	OK / Problem
☐	`P` presenter view on the laptop screen (display set to **Extend**): notes, next slide and timer; the projector follows.	OK / Problem
☐	`B` blanks the screen, `T` starts the activity timer, `O` shows all slides.	OK / Problem

E 2–3 students, no help — Unit 1 + Missions M-01 to M-03 on their own phones

☐	They find the site and start Unit 1 from the announcement alone. Time taken: _____ min.	OK / Problem
☐	They finish M-01 – M-03. Where did they get stuck or ask for help? (write below)	OK / Problem
☐	Unit 1 quiz score: _____ / _____ / _____. Ask: "What was confusing?"	OK / Problem

Git Passport acceptance (Milestone 7) is on the back →

F Git Passport acceptance

Milestone 7 · do this on one Android phone and one iPhone

Before you start: on the phone, finish at least one mission (e.g. M-01) so the passport has something to show. Tick a box for each phone where the check works.

Check	Android	iPhone
F1 Navigation — Menu ☰ → **Git Passport** opens the passport. On the home page, the link **Your Git Passport** → is shown.	☐	☐
F2 Matches Missions — XP, level, missions done and badges on the passport are the same as on the **Missions** page. XP _____ · Level _____ · Missions ___/15 · Badges ___/9	☐	☐
F3 Next step — the **Go** → button opens the suggested mission, quiz or lesson.	☐	☐
F4 Name — **Edit name** → type a name → **Save**. Close and reopen the page: the name is still there.	☐	☐
F5 PNG card — **Download card (PNG)** saves an image. Open it: it shows the name, level, XP and "*not an official college certificate*". Android: Downloads / Files / Gallery · iPhone: tap **Download**, then Files → Downloads (or long-press the preview → Save to Photos)	☐	☐
F6 PDF — **Print / Save as PDF** → save as PDF → it is **exactly one A4 page** with the five unit cards and nine badges, and the label at the top. Android: printer = **Save as PDF** · iPhone: in the print preview, pinch out on the page → Share → **Save to Files**	☐	☐
F7 Offline — open the passport once with internet. Turn on **airplane mode**, open the installed app from its icon → Menu → Git Passport: it opens with the same numbers.	☐	☐
F8 Layout & touch — in portrait, nothing is cut off and there is no sideways scrolling; text is readable without zooming; every button (Edit name, Save, Go, Download, Print, Open Unit) works with one thumb tap.	☐	☐

Android model / browser: _____ · iPhone model / iOS: _____

Already checked automatically on 23 Oct 2026 — no need to repeat

- `npm test` 85/85: passport numbers, badge rules, every next-step rule, and 18 import-safety checks.
- `npm run build` ; the passport page is in the offline cache.
- Print (desktop Chrome): one A4 page with sample, empty, dark and light progress. PNG card: 1200 × 630 with the label.
- Desktop browser set to phone size (360 px): no sideways scroll, all buttons ≥ 44 px. Opening the passport saves nothing.

Not covered by those checks — this page exists for them: real touch, the Android and iPhone download and print screens, the installed app working offline, and Safari.

Notes — what failed, on which device, screenshots taken · **Report back:** photograph both sides of this sheet and send them with any screenshots.
